HISTORY MANAGEMENT

History Management

History Management gives you the ability to track changes made to all records by individual users with an easy-toidentify method. With the click of a button you can view all the changes made to a particular record inside your NAV database, with seamless simplicity and ease.

Installation and setup can be completed in approximately 45 minutes in your Dynamics NAV system, regardless of version. Your implementer will use their developer's license to import the objects, and ask you to specify the tables on which you want to implement History. They will then run a simple step-by-step process to complete your implementation.

How It Works

History Management records and stores all changes made by recording the username, date, time and the nature of the change made by a particular user. To view changes made to a record, all you have to do is click on the history icon provided, and a pop-up window will display what changes were made, when and by whom. History Management also provides an optional reporting tool that allows you to preview and print out all the recorded changes made to a tracked table. Using a few of the filters provided by the report, the user can customize the report to display the filtered data.

The following history view shows various versions of the customer card and the changes made by each user.
