# ADDRESS VERIFICATION

## Address Verification

Verifying and maintaining the integrity of your addresses will increase customer satisfaction through accurate shipments and reduce charges due to shipping errors related to residential vs business addresses, incorrect zip codes or missing zip codes.

Lanham Address Verification is offered as a monthly service to verify any US or APO and FPO address in your system. Changes are stored in your business system and accessed when needed for customer and vendor information, as well as for sales orders and purchase orders. The objective is to verify addresses at initial entry, such as when creating a customer record, which will reduce entry time and, later, potential frustration at shipping time.

Typically, customers add addresses to their system in 3 ways:

1. Adding a customer or vendor manually when entering an order.

2. Importing sales orders from websites which in turn create customer and ship-to information.

3. Receiving EDI orders from on-line retailers for drop-ship fulfillment.

Once an address has been verified against the cloud database, it is stored in a separate verified address table in your local database. This allows the system to check verification when this address is used in a new document, such as a sales order, without interaction by the user and without another comparison of the address to the cloud database.

Addresses need to be re-verified occasionally to ensure that nothing has changed. This is done by using a date formula that automatically re-verifies the address after a specified number of days, weeks, or months. This verification is handled without interaction from the user unless for some reason the address can't be re-verified.

In addition, an Address Worksheet allows you to verify addresses in groups, such as customers or sales orders that have not been verified. This feature is useful after the initial installation of Address Verification to verify, correct, and update all of your addresses.

## Address Verification is a Lanham NAV Extension

Address Verification is a Lanham NAV Extension in NAV 2016 and newer versions. Extensions are Microsoft's methodology used to extend Microsoft Dynamics NAV and D365 functionality without modifying the base code.

With an extension, no object merge is required. You can easily install, upgrade, and uninstall functionality, making NAV upgrades

## Prerequisites

Must be running NAV 2016 or newer.

## About the Developer

Lanham Associates® provides supply chain business value to middle market distributors and manufacturers by streamlining operations, cutting costs, and increasing overall productivity.

Specialists in distribution and Microsoft Dynamics NAV right from the start, Lanham prides itself in creating and implementing quality software and services that improve customers' business processes. With Lanham solutions you can also count on staying current since Lanham stays in lockstep with Microsoft on the latest technology offerings.

Uniquely, Lanham solutions allow users to keep all of their data right at their fingertips in NAV. No tedious customizations or integrations with external sources. No new user interfaces to learn. All the drill-down and reporting capabilities of NAV, and all your key data inside *your* business system. It's seamless simplicity at its best, and it's reflected in all of Lanham's offerings.
